

ROTALIGN® Ultra iS

The Alignment intelligent System

We care about your assets

Present in all industries

PRÜFTECHNIK Alignment Systems, the inventor of laser alignment, has many decades experience developing, manufacturing and applying laser-based alignment systems.

Our measurement systems are used in alignment applications for rotating machinery within all industries.

Our precision is your benefit

40 years' experience in making your machines run better

Extend machine availability and efficiency

Precision alignment pays

Rotating machinery is susceptible to misalignment. Machines should be well aligned at the commissioning stage and thereafter regularly maintained. This increases the mean time between failures (MTBF) effectively resulting in high savings in maintenance costs. Laser precision alignment extends machine availability and protects assets while increasing product quality as vibration is reduced to very low levels.

Precision alignment guarantees

- ▶ Reduced energy consumption
- ▶ Reduction in bearing, seal, shaft and coupling failure
- ▶ Reduced bearing and coupling temperatures
- Reduced vibration
- ▶ No breaking (or cracking) of shafts
- Secure foundation bolts

Advantages of laser shaft alignment

Single laser technology shaft alignment systems from PRÜFTECHNIK take hundreds of readings, with the highest accuracy and simplicity, making it possible to perform measurement in all conditions.

- User-friendly and intuitive
- Accurate and precise
- ▶ Take unlimited readings at any desired position
- Measurement repeatability check through a unique measurement table
- Simultaneous live monitoring of machine corrections in vertical and horizontal directions
- ▶ Documentation and professional reports

ROTALIGN® Ultra iS -

the ideal solution for all requirements

Achieve your objective with intelliSWEEP® in three simple steps

1. Enter dimensions

2. Rotate shafts

3. Display alignment status

Live Trend

The monitoring function is used to analyze thermal or process-related machine positional changes during run-up and coast down phases, at the same time recording machine vibration.

Vibration Acceptance Check

The vibration check following the alignment ensures that the machine can be operated without restrictions. No additional accessories are required with ROTALIGN® Ultra iS.

Live Move

Simultaneous live monitoring of machine corrections in vertical and horizontal directions. 'Live Move' can be started with the sensor at any angular position.

Ideal for repair and reconditioning of internal combustion engines, piston compressors and pumps and also for alignment of stern tubes.

Specially suited for alignment of steam and gas turbines and precision measurement of the internal components of turbines, such as bearing rings, diaphragms, inner shells and casings.

Bore alignment

Geometric applications

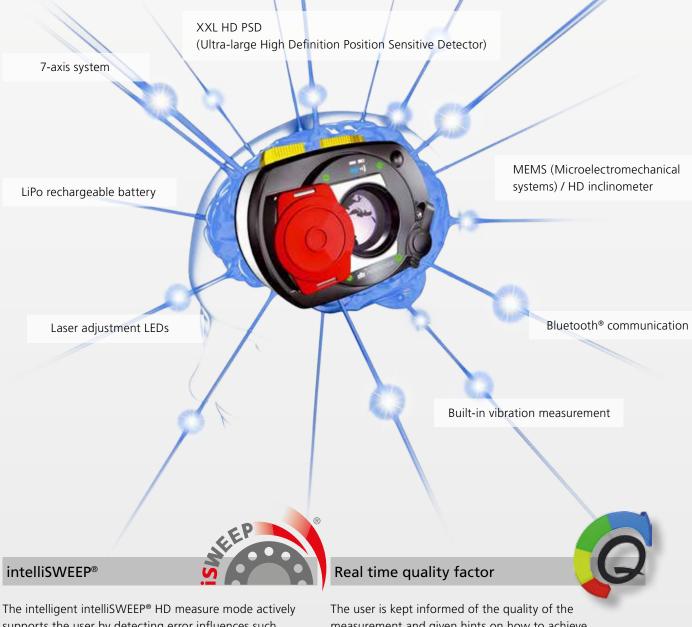

Accurate measurement of straightness, surface flatness, levelness, parallelism and perpendicularity.

sensALIGN® on-board intelligence

supports the user by detecting error influences such as coupling play, rotational angle or vibration, and automatically eliminating them.

As shafts rotate, a large number of measurement data is automatically and continuously recorded. This is much more accurate when compared to measurement methods where measurement is taken at three positions only.

measurement and given hints on how to achieve improved measurement data.

- Quality factors
- ▶ Rotation angle
- ▶ Ellipse standard deviation
- ▶ Environment vibration
- ▶ Rotation evenness
- Angle rotation inertia
- ▶ Rotation direction
- Rotation speed
- ▶ Filter output

"intelliSWEEP®: the new and unique intelligent HD measurement mode that collects and processes hundreds of real measurement points"

sensALIGN® on board-intelligence

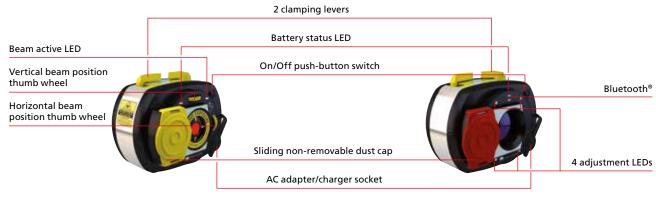

Automatically compensates for negative influences

At a glance

- Real time quality by intelliSWEEP
 Always precise, accurate and repeatable
- 7-axis measurement system with High Definition PSD, XXL detector
- In-built vibration measurement
 Measure machine vibration before, during
 and after alignment, no need for additional
 bardware
- Environmental vibration monitoring Accurate shaft alignment under vibrating condition
- Precision in-built inclinometer through MEMS
 Used for backlash detection
- Communication to the sensor through the laser beam
- sensALIGN® laser information readily available
- Integrated class 1 Bluetooth®
 Wireless communication without additional accessories
- Rechargeable battery with latest LiPo technology and intelligent power management Long runtime without memory effect

sensALIGN® laser sensALIGN® sensor

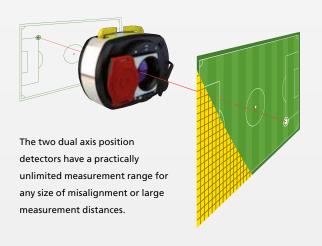

ROTALIGN® Ultra iS – impressive features

Don't miss out on these highlights

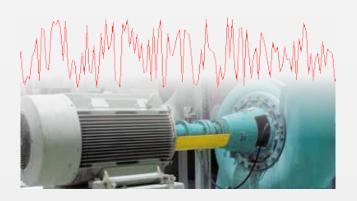

7-axis-measurement system with XXL HD PSD

7-axis HD PSD (Ultra-large High Definition Position Sensitive Detector) measurement system provides repeatable precision for any misalignment.

Built-in vibration measurement

- Check the running machine vibration before and after alignment
- ▶ Environmental vibration monitoring
- ▶ Recording vibration during 'Live trend' measurement

Inclinometer using MEMS

Precision built-in inclinometer using MEMS in both laser and sensor for detection of coupling backlash.

Power management

- ▶ Intelligent power management for laser and sensor
- ▶ Rechargeable battery with latest LiPo technology
- ▶ Long runtime and no memory effect
- ▶ Battery interchangeable between sensor and laser
- Laser and sensor can be powered through the computer

Communication/data transmission

Communication to the sensor through the laser beam: intelligent laser data streaming e.g. angle and battery status.

Integrated class 1 Bluetooth® wireless communication without additional accessories.

ROTALIGN® Ultra iS analysis tools

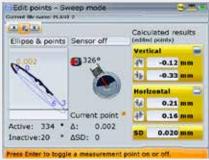

Tools to enhance machine alignment condition

Soft foot analysis is simplified with a diagnostic tool.

Editable ellipse

Allows editing of raw measurement data and the analysis of the alignment conditions.

Thermal growth calculator

Used to determine the machine expansion parameters mathematically.

Move Simulator

Simulates shim values and horizontal movement corrections.

Measurement table, standard deviation

It allows the quality and repeatability of measurements to be determined precisely.

Customized tolerances

The user can set customized tolerances for improved evaluation of the alignment conditions.

... or save a machine assembly that is commonly used in your organization.

Coupling play

Detection and suppression of coupling play.

Alignment Center PC Software

Document your job the most convenient way

ALIGNMENT CENTER

This PC software platform is used for all PRÜFTECHNIK Alignment instruments and applications. It is the perfect solution for preparing, analyzing, organizing and archiving measurement files. All alignment and measurement specifications including thermal growth compensation, alignment presets and tolerances are saved for future use. The files can be transfered from the PC to the instrument and vice versa. The software is also used for professional reporting capabilities.

Organize files in a tree structure with unlimited hierarchy.

Set-up

Create user-specific templates to suit the measurement job

Set up file information to include file and user names, company, plant, area and machine train

Prepare file in advance on a PC and transfer to the instrument via the two-way communication

Graphic display of measurement results.

Archiving

Create a backup of measurement files

Restore files saved in the backup

Organize files in a tree structure with an unlimited hierarchy

Any type of document can be stored in the tree structure

Comprehensive database search

Ability to import and export data

Management of measurement files and any other file type

Customized professional reports (example).

Analysis and Reporting

Display results in either 2D or 3D graphics depending on the application

Evaluate results using the measurement table

Customise measurement reports to include company information and logo

Simulate measurement results by entering manual values

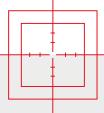

Optimize alignment by redefining fixed feet

User-defined tolerances

Conversion of dial gauge readings

Quick steps to perfect machine alignment

PREPARATION

Identification of the machineUse the RFID reader for clear identification of machine to be aligned – all at the press of a button.

Sensor and laser mounted on the shafts using the compact chain type bracket or the magnetic bracket.

MEASUREMENT AND ALIGN

Measurement
Hundreds of measurement points are collected and
transmitted wireless to the computer.

CONFIRMATION

Vibration measurement
The good alignment should be confirmed by reduced vibration values.

SaveUpdated machine data and alignment status are recorded on the RFID tag.

Adjustment of the laser beam

The four adjustment LEDs make centring the laser beam child's play.

Enter dimensionsThe necessary sensor and machine foot dimensions are quickly inputted.

MENT

Vertical and horizontal alignment correction
Simultaneous live monitoring of machine corrections in
vertical and horizontal directions.
PERMABLOC® shims in appropriate sizes simplify the process
of raising or lowering the machine.

CONCLUSION – the machine runs smoothly again

Three packages: Standard – Advanced – Expert

Standard

High resolution color backlit TFT screen – 145 mm/ 5.7 inch diagonal and backlit alphanumeric keyboard

USB interface for PC and printer

Heavy-duty Li-Ion rechargeable battery

Rigid pre-assembled universal brackets and additional support posts included in a pouch

UniBeam – patented single laser-sensor technology for quick laser adjustment

Integrated electronic inclinometer

Alignment of horizontal, vertical and flanged-mounted machines

Alignment of coupled / non-coupled and rotatable / non-rotatable machines

Alignment of cardan and spacer shafts (cardan requires a special bracket)

Machine train alignment up to 6 machines

Soft foot measurement and correction

User-defined tolerances

TolChek® – automatic evaluation of alignment condition with 'Smiley' and LEDs

Variety of measurement modes: SWEEP, Static, Multipoint and Dial gauge inputs

InfiniRange® extends detector measurement range to handle gross misalignment

Live monitoring of horizontal and vertical corrections – Live Move

Move simulator

Static feet selection to resolve base-bound and bolt-bound problems

Realistic machine graphics which can be designated

Save thousands of measurement files in the device

Save reports as PDFs directly to memory stick

Data protection - auto save and resume capability

In compliance with IP 65 classifications

PC display for presentations/training in customer premises

Platform prepared for other alignment applications like Straightness, Flatness and Bore concentricity measurement

RFID Machine Identification

ROTALIGN® Ultra iS is based on a three-level system. The basic Standard version is packed with powerful features that include the Move Simulator and user-defined tolerances. This version is easily upgradable to the Advanced version to include the intelligent features and the powerful analysis tools. The system can be extended to the Expert level by adding 'Live Trend' and/or the multiple coupling application.

Advanced

Intelligence features

Vibration acceptance check without extra accessories

Live simultaneous Move in both horizontal and vertical directions

Soft foot wizard

Machine train up to 14 machines

Measurement Pass mode

Standard Deviation

Editable ellipse

Thermal growth calculator

Under/over-constrained feet

File/Machine templates

Vector tolerances

History table

Expert

'Live Trend' with magnetic or permanent fixation brackets

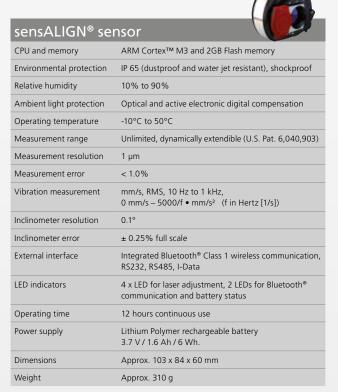

Multiple coupling measurement

Optional: Shims and mounting brackets for different applications.

CE conformity

Service and customer support

Come with us to the next level of alignment systems

Quality of service

The PRÜFTECHNIK high-tech lab is the heart of our development. Sensors, lasers and new systems are developed, tested and produced to the highest quality every day.

Because we care about the quality of our products and our customers needs, we have established service centres worldwide to ensure that customers have precision alignment available to them at all times.

Customized product training

Training and seminars are presented by a professional team and are intended to support professional users with the application of the systems and to familiarise them with alignment applications in depth.

Machinery service

PRÜFTECHNIK provides a full range of high-end alignment services. Our dedicated machinery service experts assist you in the overhaul of large and complex machinery as well as with large-scale alignment projects such as the construction and installation of new turbines. Our services include shaft alignment, monitoring of positional changes, geometric alignment and turbine alignment.

PRÜFTECHNIK consists of the following business areas

Condition Monitoring

Nondestructive Testing
